

Redundant command !save-config in command section

Details:

Bug ID: BG_FU_2
Type: Bug
Project: "Overlady" Discord bot
Priority: Low
Affects versions: None
Component/s: Config Extension commands
Labels: Reproducible, New
Status: New

Environment:

Windows 11 Pro 22H2.13155

WSL: 2.0.14.0

Docker Engine version: 24.0.7

People:

Assignee: None
Reporter: Zirochka

Description:

The command should allow you to update the config on disk after changes through the Discord bot commands. However, the config is automatically saved after entering the !alter-config command without requiring a !save-config command. The bot processes this command, but it does not provide any benefit.

Location:

Config Extension commands - !save-config

Steps to reproduce:

1. Open channel with the "Overlady" bot in Discord guild
2. Use command !alter-config to change data via bot:
!set-conf bot.command
>>> help = ["help", "h", "man", "manual", "what-can-you-do?"]
3. Open the config file overlord.cfg. The data will already be automatically saved.

Actual Result:

The config is automatically updated and saved to disk without entering !save-config command

Expected result:

New changes in config made through a bot are not saved to disk without !save-config command. !save-config command save data on disk.
