

Test case

Test case ID: TC_FU_14	Test designed by: Zirochka
Test priority: High	Test designed date: Zirochka
Module name: Stats Extension	Test executed by: Zirochka
Test title: Update statistics after the bot is disabled	Test designed date: Zirochka
Description: Checking the process of updating statistics on actions that occurred while the bot was disabled.	

Pre-conditions:

- Discord app is open
- Docker must be running
- The Bot must be placed in the Discord test guild
- The bot must be running
- A channel must be created on your guild that is not a bot service channel

Step	Step Details	Sample test data:	Expected results	Actual results	Status	Note
1	Open channel with the "Overlady" bot in Discord guild				Pass	
2	Find out the number of your messages using the command !user-stats @YourUsername				Pass	
3	Stop the Discord bot by stopping the docker container through the terminal.				Pass	
4	Write a few messages to your guild channel (which is not the bot's service channel)				Pass	

5	Start the Discord bot by running a Docker container through the terminal.				Pass	
	Updating data using !reload-stats		Bot response: Calculating stats Operation completed successfully	Bot response: Calculating stats Operation completed successfully	Pass	
6	Check the number of your messages again using the command !user-stats @YourUsername		<p>The bot updated the data and counted the user actions that were performed while the bot was disabled.</p> <p>The number of messages has increased, according to the number of messages written during the bot's shutdown.</p>	<p>The bot updated the data and counted the user actions that were performed while the bot was disabled.</p> <p>The number of messages has increased, according to the number of messages written during the bot's shutdown.</p>	Pass
