Incorrect commands !user-stat and !user-stats description

Details:

Bug ID: BG_US_4
Type: Bug
Project: "Overlady" Discord bot
Priority: Low
Affects versions: None
Component/s: Overlord Help page
Labels: Reproducible, New
Status: New

Environment:
Windows 11 Pro 22621.3155
WSL: 2.0.14.0
Docker Engine version: 24.0.7

People:

Assignee: None
Reporter: [Zirochka](#)

Description:
The description of **!user-stat** and **!user-stats** commands do not accurately indicate their functionality. Now the description of the commands is divided into "Fetches user stats from db **(for specified user)**" and "Fetches user stats from db". This makes it appear that one command is collecting statistics for one specific user, while the other command is showing statistics for all users.

In practice, both of these commands show statistics for a specific user.

Location:
Help page-Stats Extension

Steps to reproduce:
1. Open test guilt with "Overlady" bot
2. Enter the command !help to open the help page
3. Open page 3 and read !user-stat and !user-stats descriptions.

4. Enter the command !user-stat
5. Enter the command !user-stats

Actual Result:
!user-stat - "Fetches user stats from db **(for specified user)**"
!user-stats - "Fetches user stats from db"

Expected result:
Point out that these commands differ in sample statistics. One command gives the complete statistics of the selected user, and the other gives a specific metric of the selected user's statistics.

!user-stat - "Fetches user stats from db and shows statistics on the selected metric for the user

!user-stats - "Fetches user stats from db and shows all metrics for user"
